Environment, Modules, and Job Submission Cheat Sheet Environment Variables Modules Print current environment variables: Print current environment variables: \$ env \$ module list Print the contents of a specific variable: Print the contents of a specific variable: \$ echo \$PATH \$ module avail \$ env | grep PATH Define new or edit existing environment variables: Define new or edit existing environment variables \$ module show modulename (contents at the beginning supersedes contents at Load and unload modules: \$ export PATH=\$PATH:/new/path/to/add \$ module load modulename \$ export PATH=/new/path/to/add:\$PATH \$ module unload modulename Find more help on using module commands: Environment variables reset by logging out and in: \$ logout \$ module help

Job Submission Script Comparison			
Feature	SLURM (Stampede)	LSF (Shark)	PBS (Nautilus)
Resource directive	#SBATCH	#BSUB	#PBS
Number of nodes/procs	-N nodes -n procs	_n #	-1 n=#:ppn=#
Wall clock limit	-t hh:mm:ss	—₩ hh:mm	-1 walltime=hh:mm:ss
Queue	-p queue	-q queue	-q queue
E-mail on job begin	mail-type=X	-B	-m b
E-mail on job end	X=begin, end, all	_N	-m e
E-mail address	mail-user=email	-u email	-M email
Job name	-J jobname	-J jobname	-N jobname
Output log	-o logname.o%j	-o path/	- o path/
Error log	-e logname.e%j	-e path∕	-e path/
Out & Err to same log	use -o without -e	use -o without -e	-j oe
Working directory	-cwd path/	-cwd path/	-d path/
Initial directory	(default = `pwd`)	(default = `pwd`)	(default = \$HOME)
Queue Command Quick Ref			
Command	SLURM (Stampede)	LSF (Shark)	PBS (Nautilus)
Submit a job	<pre>\$ sbatch jobfile</pre>	<pre>\$ msub < jobfile</pre>	<pre>\$ bsub < jobfile</pre>
Delete a job	<pre>\$ scancel jobid</pre>	<pre>\$ cancel jobid</pre>	\$ bkill jobid
Show status of jobs	\$ showq	<pre>\$ qstat jobid</pre>	\$ bjobs
	\$ showq —u usernm	<pre>\$ qstat -f jobid</pre>	\$ bjobs —u all
		\$ gstat -u username
